

FRATER

FRR 418/4

Regular with single parabolic specular louvre with serrated cross blades & 4 Ballast

Modular Recessed Fluorescent Luminaire with 4 nos. Electromagnetic ballast

TECHNICAL DATA

Description:

Frater fluorescent luminaires for installation in metric modular false ceiling with exposed-T grids. Suitable for 4 nos. 18W/T8 fluorescent lamps operated by 4 nos. Electromagnetic ballast.

Application:

Suitable for general lighting applications in indoor areas like offices, computer rooms, schools, hospitals and commercial areas like shops etc.

Features:

Modular construction
Conforms EN 60598
Easy to install & maintain
Switch start circuit
Internal wiring with heat resistant (105°C) single strand copper wire.

Optical attachments:

Polished, reflective aluminium mirrors and serrated cross blades.

Options :

HPF capacitors, Electronic starters, HF circuits, RFI capacitors, Emergency pack for 3 hrs duration, other voltages and freq.

Material & Finish :

Housing: CRCA sheet steel powder coated white, both inside and outside.

Louvres : High purity reflective aluminium sheets parabolic formed V blades and serrated cross blades. The louvre system can be hinged by anticorrosive wishbone springs.

Ballast : **Frater** ballast, Low energy loss, noiseless operation, low operating temperatures, minimum temperature rise. Each of the four 18 W/20W lamps are operated by independent ballast. In the event of failure of one lamp the other 3 lamps will continue to operate as they are controlled by independent Ballast. Moreover failure in the control gear would affect only one lamp.

Lamp & Starter holders : Flame-retardant high quality plastic.

Wiring : PVC insulated single strand heat resistant wire.

Dimensional Data :

Type	Lamp rating	Dimensions (mm)		
		L	W	H
FRR 418	4x18W/20W	596	596	98
